EDUCATION

Louisiana State University

August 2022 – May 2026

Bachelor of Science in Computer Science, Concentration in Software Engineering

Baton Rouge, LA

Minor in Digital Media Arts & Engineering

- GPA: 3.8 | Latin Honors: cum Laude
- Relevant Coursework: Algorithms & Data Structures, AI & LLM Development, Digital Media Programming

EXPERIENCE

Web Application Developer

May 2024 – January 2026

LSU Information Technology Services | Java (Spring Boot), JavaScript, HTML/CSS

Baton Rouge, LA

- Rebuilt a production employee invoicing dashboard, resolving database object errors, correcting data mapping, and redesigning web app layout to be more responsive and intuitive to users
- Modernized a university equipment rental portal serving 25k+ users by replacing legacy table-based layouts with responsive Flexbox designs, restoring broken data connections, and removing deprecated components

AI Development Intern

January 2026 – Current

Franciscan Missionaries of our Lady Health System | Python, Power Automate, MCP, ServiceNow

Baton Rouge, LA

- Maintaining AI orchestration system in Microsoft Teams that routes employee queries to vendor bots and ServiceNow knowledge bases, reducing manual lookup steps for hospital staff
- Developing AskHR, a custom ServiceNow HR portal that enables hospital employees to submit and track requests tickets through custom forms, automated workflows, and service catalog solutions, leveraging existing ServiceNow capabilities as a cost-effective alternative to dedicated HR platform licensing

PROJECTS

Suni: The Travel Companion | HTML/CSS, JavaScript, React.js, Redis, Django(Postgres), Python, OpenAI API

- Built core user-facing features including a conversational AI assistant for real-time itinerary edits, a weather-integrated calendar, budget tracker and user preferences quiz, connecting each to a Django/Postgres backend
- Integrated MCP-powered orchestrator that processes user preferences and coordinates hotel search, location, weather forecast, and budget tools to autonomously generate personalized travel itineraries

OrchestrAI | Python, Azure AI Foundry, Redis, Cosmos DB, OpenAI API, FastMCP, Model Context Protocol

- Designed a multi-agent AI orchestration system that routes employee queries across vendor bots and live data sources, integrating FastMCP, AI policy agents, and ServiceNow for real-time knowledge retrieval
- Built full MCP architecture in Python, implementing a host client for conversation flow and tool selection with MCP servers that expose tools, execute functions against live data sources, and return formatted outputs to the orchestrator

Deadman's Hand: Gambling Education Through Simulation | HTML/CSS, TypeScript, React.js, Firebase

- Built the frontend and card battler mechanics, implementing a behavioral scoring system that tracks spending habits and purchase patterns to calculate a manipulation susceptibility score
- Connected Firebase for user authentication, card and currency storage, gacha probability systems, battler damage calculations, and dynamic score rendering across gameplay sessions

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS, SQL, Java, C

Libraries / Frameworks: React.js, Node.js, Vite, TailwindCSS, Spring Boot, FastAPI, Django REST Framework

Tools / Platforms: Git, Figma, Docker, Firebase, AWS, ServiceNow, Azure AI Foundry, Power Automate, Copilot Studio
